

GLOBALDIP®53

Post-milking udder treatment with iodine

ready-to-use solution

Product properties

- contains skin caring and softening substances
- prevents the penetration of unwanted microorganisms into the teat canal after milking

Globaldip®53 is a skin-friendly and effective care product specially designed for post-milking teat care. A unique product composition prevents the penetration of unwanted microorganisms into the teat canal after milking, contributing to the increase in resistance of the body to various pathogens.

Ingredients

water, glycerin, PVP iodine (10 000ppm), lactic acid, xantham gum

Usage

Clean the udder and teats before using the product. Using the teat dip cup, immerse the teats at least for 3 cm into the Globaldip®53 solution.

Biofilm that forms after the use, closes the teat canal and protects it against external influences. Clean the teat dip cup after usage.

If in eyes: Rinse cautiously with water and get medical advice/attention if necessary!
